WASH & HIV/AIDS INTEGRATION: THE EVIDENCE BASE BIBLIOGRAPHY 2007-2010

The following pages provide a list of references to studies or publications documenting evidence in support of the integration of WASH into HIV/AIDS programming. It only cites those references that deal in some way directly with the intersection of WASH and HIV and serves only as a supplement to the full literature review and annotated bibliography published by HIP in 2007. That review is also contained on the HIP website:

Other Resources

AIDSTAR One (2010). *Improving the Lives of People Living with HIV (PLWH): Strengthening WASH Practices at Health Facilities*. Washington, DC.

The package includes a Trainer Guide, providing a comprehensive 3- 4 day training designed to identify small doable actions that both lay health workers and their supervisors can accomplish in their own health facility. Tools in the Trainer Guide include participatory training activities, technical guidance, handouts and Job Aids. The second component is the Participant Guide, which includes Technical Resources, key technical information health workers need to know, including suggested readings for each day of the course as well as useful references which the participant will keep as they return to their clinic or hospital. This course uses the training methodology known as Adult Learning Theory. Participants will do many exercises in small groups, individually, and with the large group, learning from their colleagues, from the technical materials presented and from the trainers. This training manual, both the Training Guide and the Participant Guide, will be available in late 2010 on www.aidstar-one.com

Peal, Andy; Barbara Evans, and Carolien van der Voorden (2010). *Hygiene and Sanitation Software: An Overview of Approaches*. Water Supply & Sanitation Collaborative Council. Geneva, Switzerland

This document describes the various hygiene and sanitation 'software' approaches that have been deployed over the last 40 years by NGOs, development agencies, national and local governments in all types of settings – urban, informal-urban and rural. The

purposes of this document are to clarify some of the confusion in the sector about the terminology and language used and to provide a 'ready reference' or introduction to some of the more commonly-used approaches. It is intended to be used as a resource tool by both a newcomer to the subject and by the more experienced practitioner who wishes to gain knowledge of other approaches with which he or she is not familiar.

Seremet, Christopher; Catholic Relief Services (2010) *Water, Sanitation and Hygiene Considerations in Home-Based Care for People Living with HIV*. Washington, DC.

This guidance document offers water supply and sanitation facility and hygiene promotion design considerations and recommendations intended to increase access to these facilities by people living with HIV. People living with HIV often require modifications to their water supply and sanitation facilities and hygiene practices due to their debilitating illness. This guidance document is intended for Home-Based care (HBC) practitioners serving people living with this disease as well as water and sanitation engineers and technicians tasked with providing community water supply and household sanitation systems.
