

# SODIS Method To Treat Water

**1** Use clean, transparent plastic bottles that hold no more than 2.5 liters.

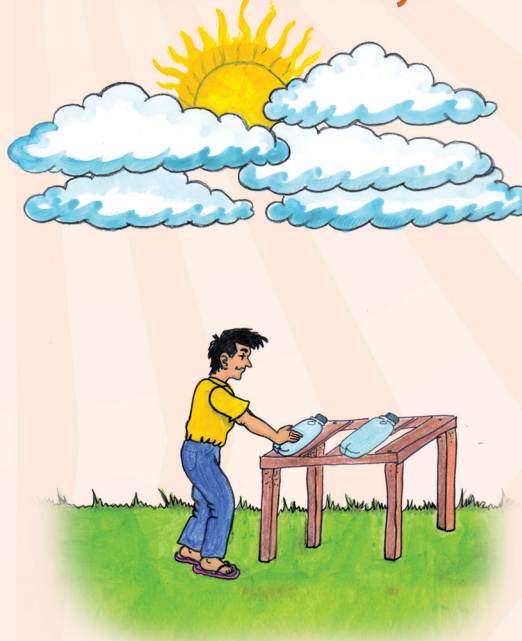

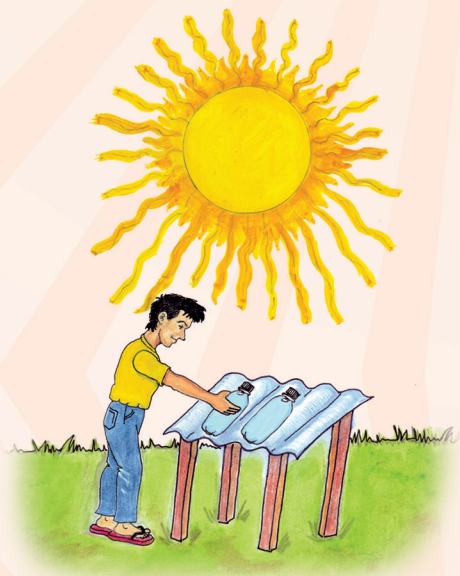

**2** Fill the bottles with clear water and screw the lid on tightly.

**3** Lay the bottles out in the sunlight

If it is sunny, leave the bottles for 6 hours.

If it is cloudy, leave the bottles for 2 days.

**4** Before consuming the water, let it cool in the same bottles.

**5** Store the water in the same bottles. Do not change containers.

**6** DO NOT use SODIS when there is continuous rain. Use another method, such as boiling or chlorination.
